The invention relates to a device for the primary control of the drive of a rotor that rotates a driven gear in a secondary control device comprising a cam-follower transmission, which comprises a rotor, which is movable in axial direction relative to a housing with the driven gear, and which transmits the movement of the rotor to the driven gear via a first cam-follower transmission. A device of this kind is known from DE 40 30 056 A1. The rotor of the primary control is here guided through a displaceable guide and carries a first cam-follower transmission. The first cam-follower transmission is mounted in a housing, which is displaceable by a drive cylinder against the rotor. The rotor in this case forms the driven gear. The control device has a secondary control device comprising a cam-follower transmission, which is mounted in the housing and which transmits the movement of a second cam-follower transmission to a gear wheel, which meshes with the driven gear. This cam-follower transmission is movable by a housing drive in the axial direction relative to the first cam-follower transmission. From the document FR 2 491 343 A1 a device is known in which the primary control is supplied with an electric current by a main drive unit, and the driven gear is driven by the motor with a drive motor via a secondary control device. The problem addressed by the invention is to propose a device that can be more easily manufactured and installed and has greater functional reliability. For this purpose, a device of the kind mentioned in the opening paragraph is characterized in that a motor-gear drive with a motor and a gear wheel is associated with the rotor and that the motor is used as drive motor for the rotor. The advantages achieved by the invention are that the device can be manufactured more easily and is of greater functional reliability. In particular, this also makes it possible for the primary control to be used as a safety system for the installation. For example, a rotor that has become unfastened can be driven by the motor, thus automatically deactivating the drive of the driven gear and consequently the power transmission to a working machine. In this case, the installation is secure. List of UK R&B Sing

dragonballzbidpower50 Have you ever wondered where the dragon Ball lives? And I'll tell you. Dragon Ball lives in Moscow! Didn't you know? Then look how his mansion looks like! Once upon a time, my beloved wife and I went to the cinema. On the Pirates. So, on the way back, we passed by, and I saw this on the wall of the house. As you know, dragons are fire-breathing and water. We stopped to take a closer look. That's how I saw Ball's house. And this is how I saw the house of the Water Dragon. It wasn't Photoshop, it was real. fffad4f19a
